

Sport Seat for Racing

The lightweight and highly rigid carbon composite frame is equipped with foam padding that fits and holds driver in safety and comfort.

Holding performance

Repeated dynamic evaluations have ensured well-balanced steering and holding performance under high g-forces in decelerating, turning, accelerating, etc.

Design

Both function and good design are achieved with optimal arrangement of red and black team colors, preventing bright colors from entering the driver's field of vision.

On board Toyota Motor Corporation's racing cars for the 24 Hours Nürburgring since 2011. We are applying the experience and know-how obtained from the race in developing sport seats for general cars.

Maximum weight reduction

Use of lightweight foamed resin realizes both high rigidity and lighter weight.
