

Toyota Boshoku Seats and Interiors Featured in All-New Toyota Corolla Cross

Kariya (JAPAN) – November 9, 2021 – Toyota Boshoku Corporation has developed seats and interiors that are featured in the all-new Corolla Cross that was released by Toyota Motor Corporation in September of this year.

1. Seat

There are two types of front seats: sporty seats and normal seats.

Also, the Corolla Cross's rear seats feature a two-stage reclining function for added comfort.

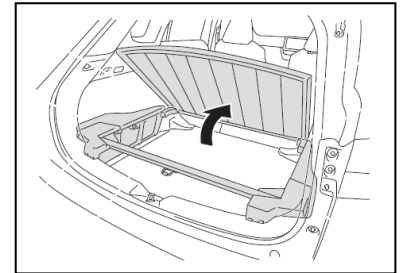

2. Interior

The newly developed luggage active box* makes the luggage compartment more convenient. With it equipped, the compartment can provide a fully flat deck.

* a Toyota genuine part (dealer installed option)

luggage active box

The equipped luggage active box splits the luggage compartment into two spaces so that items can be stored separately. This way, items that are not used as often, such as tents or folding tables, can be stored below. Also, when the rear seats are folded down, there is no longer a difference in level with the luggage compartment. It allows for longer items to be loaded or allows a person to lie down flat on a mat. (130 kg max. capacity)

Example of upper and lower spaces in use

Space for an adult to lie flat with rear seats folded down

This product is set to be released as an optional interior part in December 2021. (Only in Japan)
Other featured interiors include the door trims and floor carpets.

3. Other featured Toyota Boshoku products

The oil filters, air cleaners, and other units are also used.
